

We've Taken the Guesswork out of Glycolic Peels.

Introducing the Epi-Peel® System.
Advanced formulation & controlled dosing
provide better, more predictable results.

- **Willowherb extract**, at a clinically active level, helps soothe the skin after the beneficial effects of our controlled 40% active glycolic peel.
- **Controlled dose, concentration and timing** provide reproducible results.
- **Advanced gel formulation** provides easier, more even application.
- **Easy 3-step system** makes procedure more efficient than ever before.
- **Available in 2 levels:** level 1 (40% active) with willowherb extract and level 2 (70% active) with our anti-oxidant, magnesium ascorbyl phosphate.

1. PREP
Gently cleanse area to be treated with cotton ball partially saturated with DCL Skin Freshener until clean.

2. PEEL
*Pour epi-peel® level 1 solution into dose controller cup up to fill line. With supplied cotton applicator, evenly apply solution, leaving on skin up to 2 minutes.**

3. NEUTRALIZE
Thoroughly rinse treated areas with water. Gently pat dry.
* Length of treatment increases with each procedure. Easy-to-follow instructions included with system.
